

# Insulin Products and International Distributors

Below are two tables compiled to assist governments and others who procure insulin. The first lists human, analogue and porcine insulin products thought to be available on the international market. The second lists international insulin distributors.

## 1. Insulin Products

The following table is a list of human, analogue and porcine insulin products thought to be available on the international market. They are either solutions or suspensions in vials, prefilled pens and/or cartridges at varying volumes. Most are 100IU/ml, but some are marketed in other strengths (eg. 40IU/ml, 200IU/ml, 300IU/ml).

Please contact the manufacturer/supplier for information on whether (or not) they still supply and if so, the strengths, presentations and volumes. The list is not exhaustive and some brands may no longer be manufactured or the supplier changes. It will be updated as information becomes available.

*Please note: HAI/ACCISS Study makes no judgement on the quality of any of the products listed. That is the role of national/regional medicine regulatory authorities.*

The ACCISS Study has produced guidance on the procurement of insulin. Click [here](#) to access this guidance. While the list below includes brand names, tender or other procurement documents should use the International Non-proprietary Name (INN), plus state the additional information required ie. strength, whether human or analogue insulin, whether short-acting, intermediate-acting, rapid-acting, long-acting or a specific mix, the presentation (vial, prefilled pen or cartridge), volume of insulin per presentation etc.

## 2. International Distributors

### UN agencies

UNICEF Supply Division (<https://www.unicef.org/supply/>) stocks insulin in their Copenhagen warehouse and can supply to governments and partners in low-and middle-income countries. The price in their catalogue is an indicative price. The Pan American Health Organization (PAHO) Strategic Fund can supply insulin to governments in low-and middle-income countries

in the Americas (<https://www.paho.org/en/paho-strategic-fund>)

Private

The following distributors are thought to supply insulin but please contact them to check. If so, also check that they conformed to the WHO Model Quality Assurance System for Procurement Agencies (MQAS). The list is not exhaustive. It will be updated as additional distributors are identified.

<b>International Distributor</b>	<b>Country – Head Office</b>
